Work Experience

- **Software Engineer at Sophos** Nov 2016-Present
 - In Nov 2016, PhishThreat (now Phish Threat) got acquired by Sophos
 - Tasked with re-skinning our PhishThreat app to fit better with Sophos' theme (many HTML and CSS changes)
 - Developer on Phish Threat v2
 - Created several views with HTML, CSS, Bootstrap 3, and AngularJS 1.5
 - Implemented time-zone sensitive scheduling for phishing campaigns, using moment.js library
 - Worked on a learning management system (LMS) hosted on WordPress, mainly focused on creating endpoints that interact with our microservices. Mostly worked with PHP here.
- **Front-End Developer at Silent Break Security** July 2016-Nov 2016
 - Created a training module template for the PhishThreat web app with HTML5, CSS3, AngularJS, and Font Awesome.
 - Applied this template to various existing training modules, and created several new modules.
 - Created various HTML email "phishing" templates, and updated several existing ones.
- **Front-End Developer at TagVar, LLC** March 2016-July 2016
 - **Sun Horizon Energy** → (<http://sunhorizonenergy.com>) July 2016
 - Created a new site from scratch, using HTML5, CSS3, Bootstrap 3, and AngularJS
 - Utilized SASS partials (compiled with gulp), and CSS media queries for site responsiveness
 - Created a slide-out, togglable menu for the mobile site from scratch, using HTML and CSS
 - Used AngularJS and Font Awesome for form validation on the Contact page, + Google Maps API (map)
 - Created custom Angular directives for navbar and footer
 - **DrillRite Directional Drilling** → (<http://drillrite.net>) April 2016
 - Tasked with making their current site mobile responsive
 - Utilized CSS media queries, as well as some scripts (Javascript) and CSS classes to provide IE 9+ compatibility
 - **Intermountain Lift, Inc.** → (<http://intermountainlift.com>) March 2016
 - Created a new site from scratch, using HTML5, CSS3, JavaScript with AngularJS framework.
 - Created custom Angular directives for the navbar and footer, as well as 2 other directives
 - Utilized SASS partials (compiled with gulp), and CSS media queries for site responsiveness.
 - Implemented a PHP file to validate and send emails to Intermountain Lift directly from the site.
 - Used Google Maps API to include a map of the business location.
 - Implemented an instance of IgnitionBackend (custom CMS, using PHP) for the company May 2016

Other Projects

- **Personal Website** → (<http://kylelauritzen.net>)...Github: <https://github.com/kbl212/kyle-lauritzen> December 2015
 - My personal/portfolio website, built with HTML, CSS, and AngularJS
 - **see my personal site for a few more projects I worked on**

Education

- DevMountain(Provo , Utah) --- (www.devmountain.com) Oct 2015-Jan 2016
- Completed the 13-week immersive Web Development course in January 2016
 - Gained experience with the following: HTML5, CSS, Javascript, AngularJS, Node.js, Express, MongoDB, MongooseJS, Git, Github
