Work Experience

- **Web Contractor at TagVar, LLC**   **March 2016-present**
  - **DrillRite Directional Drilling** → (http://drillrite.net)   *April 2016*
    - Tasked with making their current site mobile responsive
    - Utilized CSS media queries, as well as some scripts (Javascript) and CSS classes to provide IE 9+ compatibility
  - **Intermountain Lift, Inc.** → (http://intermountainlift.com)   *March 2016*
    - Created a new site from scratch, using HTML5, CSS3, JavaScript with AngularJS framework.
    - Created custom Angular directives for the navbar and footer, as well as 2 others
    - Utilized SASS partials (compiled with gulp), and media queries for site responsiveness.
    - Implemented a PHP file to validate and send emails to Intermountain Lift directly from the site.
    - Used Google Maps API to include a map of the business location.
    - Implemented an instance of IgnitionBackend (custom CMS) for the company   -- May 2016
    - Created several PHP files to receive input from front-end, process it, and return some HTML

Other Projects

- **Who's My Rep** → (http://whosmyrep.herokuapp.com)   **March 2016**
  - Simple Angular app that makes calls to the API at http://www.whoismyrepresentative.com
- **Provo Housing Hub** → (http://provohousinghub.herokuapp.com)...Github: https://github.com/kbl212/provo-housing-hub
                                                                                        December 2015
  - Used AngularJS and Node.js to build this site, as well as Passport-facebook for user authentication, and Amazon S3 for file hosting
  - Used MongoDB to store user info and apartment listing data.
- **Kronolearn** → (http://kronolearn.com) ---Spaced-repetition learning web app(similar to Duolingo, Memrise)...Github:
  https://github.com/kronolearn/kronolearn   *January 2016*
  - Website I collaborated on with 3 other people, using MEAN stack
  - I added image upload capability and access through Amazon S3 services
  - I created the Quiz view/functionality, making RESTful API calls with AngularJS, Node, and MongoDB and implementing our SpacedRepetition algorithm.
  - I implemented Angular-bootstrap's typeahead feature in our navbar
- **Personal Website** → (http://kylelauritzen.net)...Github: https://github.com/kbl212/kyle-lauritzen
  - My personal/portfolio website, built with HTML, CSS, and AngularJS   *December 2015*

Education

DevMountain(Provo , Utah) --- (www.devmountain.com)   *Oct 2015-Jan 2016*
- Finished the 13-week immersive Web Development course in January 2016
- Gained experience with the following: HTML5, CSS, Javascript, AngularJS, Node.js, Express, MongoDB, MongooseJS, Git, Github
